COPYRIGHT PROTECTED DOCUMENT

© SABS

In terms of the Standards Act 8 of 2008, the copyright in all South African National Standards or any other publications published by the SABS Standards Division, vests in the SABS. Any use of South African National Standards is limited to use specifically prescribed by the SABS. In the case of a South African National Standard based on an international standard, ownership of the copyright vests in the organization from which the SABS adopted the standard, whether it be under licence or membership agreement. The SABS is obliged to protect such copyright and is authorized to make the relevant international organization aware of any misuse thereof. Unless exemption has been granted, no extract or full text of any South African National Standard may be copied, reproduced, stored in a retrieval system or transmitted in any form or by any means without prior written permission from the SABS Standards Division. This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols, and size, type or grade designations. If these details are to be used for any purpose other than implementation, prior written permission must be obtained.

Details, advice and limitations of use can be obtained from the Manager: Standards Sales and Information Services. Tel: +27 (0) 12 428 6883 email: sales@sabs.co.za

SABS – Standards Division

The objective of the SABS Standards Division is to develop, promote and maintain South African National Standards. This objective is incorporated in the Standards Act, 2008 (Act No. 8 of 2008).

The SABS continuously strives to improve the quality of its products and services and would therefore be grateful if anyone finding an inaccuracy or ambiguity while using this standard would inform the secretary of the technical committee responsible, the identity of which can be found in the foreword.

Buying Standards

Contact the Sales Office for South African and international standards, which are available in both electronic and hard copy format. Tel: +27 (0) 12 428 6883 email: sales@sabs.co.za

South African National Standards are also available online from the SABS Webstore www.store.sabs.co.za

Information on Standards

SABS Customer Services provide comprehensive standards-related information on national, regional and international standards. Tel: +27 (0) 12 428 7911 / 0861 27 7227 email: info@sabs.co.za

SANS 10400-G:2017

Edition 3.1

Table of changes

Change No.	Date	Scope
Amdt 1	2017	Amended to delete the acknowledgement, to delete the note to the scope, and to delete the annex on National Building Regulations – Part G: Excavations.

Acknowledgement Deleted by amendment No. 1.

Foreword

This South African standard was prepared by National Committee SABS/TC 060, *Construction standards*, in accordance with procedures of the SABS, in compliance with annex 3 of the WTO/TBT agreement.

This document was approved for publication in May 2017.

This document supersedes SANS 10400-G:2011 (edition 3).

A vertical line in the margin shows where the text has been technically modified by amendment No. 1.

Compliance with the requirements of this document will be deemed to be compliance with the requirements of part G of the National Building Regulations, issued in terms of the National Building Regulations and Building Standards Act, 1977 (Act No. 103 of 1977).

Compliance with this document cannot confer immunity from legal obligations.

This document should be read in conjunction with SANS 10400-A.

SANS 10400 consists of the following parts, under the general title *The application of the National Building Regulations*:

Part A: General principles and requirements.

Part B: Structural design.

Part C: Dimensions.

Part D: Public safety.

Part F: Site operations.

Part G: Excavations.

Part H: Foundations.

Part J: Floors.

Part K: Walls.

Part L: Roofs.

SANS 10400-G:2017
Edition 3.1

Foreword *(concluded)*

Part M: Stairways.

Part N: Glazing.

Part O: Lighting and ventilation.

Part P: Drainage.

Part Q: Non-water-borne means of sanitary disposal.

Part R: Storm water disposal.

Part S: Facilities for persons with disabilities.

Part T: Fire protection.

Part V: Space heating.

Part W: Fire installation.

Part X: Environmental sustainability.

Part XA: Energy usage in buildings.

Annex A Deleted by amendment No. 1.

SANS 10400-G:2017
Edition 3.1

The application of the National Building Regulations

Part G: Excavations

1 Scope

This part of SANS 10400 provides deemed-to-satisfy requirements for compliance with part G (Excavations) of the National Building Regulations.

NOTE Deleted by amendment No. 1.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies. Information on currently valid national and international standards can be obtained from the SABS.

SANS 10400-A, *The application of the National Building Regulations – Part A: General principles and requirements.*

SANS 10400-H, *The application of the National Building Regulations – Part H: Foundations.*

3 Definitions

For the purposes of this document, the definitions given in SANS 10400-A (some of which are repeated for convenience) and the following apply.

3.1

competent person (civil engineering)

person who

- a) is registered in terms of the Engineering Profession Act, 2000 (Act No. 46 of 2000), as either a Professional Engineer or a Professional Engineering Technologist;
- b) has a tertiary qualification (degree or diploma) in civil engineering; and
- c) is generally recognized as having the necessary experience and training to undertake rational assessments or rational designs in the field of civil engineering

SANS 10400-G:2017

Edition 3.1

3.2

competent person (engineering geology)

person who is registered as a Professional Natural Scientist in terms of the Natural Scientific Professions Act, 2003 (Act No. 27 of 2003), and has a BSc (Hons) degree or higher qualification in engineering geology

3.3

deemed-to-satisfy requirement

non-mandatory requirement, the compliance with which ensures compliance with a functional regulation

3.4

foundation

that part of a building which is in direct contact with, and is intended to transmit loads to, the ground

3.5

functional regulation

regulation that sets out in qualitative terms what is required of a building or building element or building component in respect of a particular characteristic, without specifying the method of construction, dimensions or materials to be used

3.6

rational assessment

assessment by a competent person of the adequacy of the performance of a solution in relation to requirements including as necessary, a process of reasoning, calculation and consideration of accepted analytical principles, based on a combination of deductions from available information, research and data, appropriate testing and service experience

3.7

rational design

design by a competent person involving a process of reasoning and calculation and which may include a design based on the use of a standard or other suitable document

4 Requirements

4.1 General

The functional regulation **G1(1)** contained in part G of the National Building Regulations shall be deemed to be satisfied where the excavation relating to a building

- a) is less than 3,0 m deep and complies with the requirements of 4.2, or
- b) Is the subject of a rational design or a rational assessment (or both) prepared by a competent person (civil engineering) or competent person (engineering geology).

NOTE 1 No excavation can be made without causing some movements. Any method of construction that involves vibration, such as blasting, piling or compaction, might cause damage to adjacent buildings either directly from the vibrations themselves or their effect on the underlying soils.

NOTE 2 In rock excavation, stability is governed more often by the properties of the joints rather than the rock material.

NOTE 3 The South African Institution of Civil Engineering's (Geotechnical Division) *Code of practice for lateral support in surface excavations* provides practical guidance to enable a competent person (civil engineering) or competent person (engineering geology) to comply with the requirements of 4.1(b).

NOTE 4 Part G of the National Building Regulations is concerned with the safety or stability of any property or service. The Construction Regulations issued in terms of the Occupational Health and Safety Act, 1993 (Act No. 85 of 1993) are concerned with the safety of workers during the construction period. Part G is therefore concerned with the location and geometry of the excavation while the Construction Regulations are concerned with the actual construction of the excavation.

SANS 10400-G:2017
Edition 3.1

4.2 Excavations

4.2.1 Temporary excavations

Temporary excavations shall not extend below the line shown in figure 1 drawn from the bottom edge of the foundation of a building.

Surface water shall be diverted away and prevented from running down the cut and causing erosion.

a) Temporary excavation exposing existing foundations

The sides of the excavation shall comply with the requirements of the Construction Regulations issued in terms of the Occupational Health and Safety Act, 1993 (Act No. 85 of 1993).

b) Temporary excavation in close proximity to building

Figure 1 — Temporary excavations

SANS 10400-G:2017

Edition 3.1

4.2.2 Permanent excavations

4.2.2.1 The slope of cuttings in permanent excavations shall not be steeper than 1:2 (see figure 2), except in the case of sound, intact rock, where the slope of the cutting may be vertical.

4.2.2.2 The excavation shall be sloped so that no water ponds within 3 m of the toe of the cutting.

4.2.2.3 Surface water shall be diverted away and prevented from running down the cut and causing erosion.

Figure 2 — Permanent excavations

SANS 10400-G:2017
Edition 3.1

4.2.3 Blasting

4.2.3.1 The distance from a blast hole to the closest point of a building, other than a historical monument or buildings with a foundation system that does not comply with the requirements of SANS 10400-H, shall be not less than that given in table 1.

4.2.3.2 Detonating relays shall have at least a 20 millisecond delay interval.

Table 1 — Minimum distances of blast holes from buildings

1	2
Minimum distance from the nearest blast hole to a building	Maximum charge mass per relay for commercial explosives
m	kg
10	0,19
20	0,76
30	1,7
40	3,0
50	4,7
60	6,8
70	9,3
80	12,1
90	15,3
100	18,9
NOTE The maximum charge levels should keep the peak particle velocity at buildings below 50 mm/s.	

SANS 10400-G: 2017

Edition 3.1

Annex A

Deleted by amendment No. 1.
